

BIOCHEMISTRY SEMINAR SERIES

Faculty Research Seminars – Fall 2020

Prof. Jose Rodriguez

UCLA Chemistry & Biochemistry

Jose's group studies molecular systems at the atomic scale. The work relies on diffraction phenomena and combines computational, biochemical and biophysical experiments. The development of new methods is central to this work, particularly using emerging technologies in cryoEM, nano and coherent x-ray diffraction, and macromolecular design. Combined, these tools can reveal undiscovered structures that broadly influence chemistry, biology, and medicine.
